Profiles [in](#) [Mihir Gupta](#)

Summary Innovative Software Engineer with over 3 years of experience at Siemens EDA and Samsung R&D. I specialize in designing, building, and deploying scalable systems that power digital experiences. With a strong technical foundation from IIT Delhi, I have led product initiatives—from requirements gathering to production—using modern programming practices, agile methodologies, and robust CI/CD pipelines.

Experience	Siemens EDA Software Engineer	February 2024 – Present Noida, India
	- Developed and maintained a fault detection application for the Veloce TBX platform, resulting in a 19% increase in throughput. - Designed and implemented a fault ranking algorithm that reduced debugging time by 18%. - Engineered an incremental RTL trigger solution that was critical to a client’s success and contributed significantly to \$10 million in revenue. - Optimized simulation algorithms using multi-threaded and concurrent programming techniques, expanding detection coverage by 37%. - Established automated testing frameworks and CI/CD pipelines with Git, Docker, and Kubernetes, reducing deployment errors by 28%. - Collaborated with cross-functional teams to translate business requirements into maintainable software.	
	Samsung R&D Institute Software Engineer	June 2022 – January 2024 Bangalore, India
	- Designed and optimized backend modules in a Linux environment, achieving an 18% improvement in system performance and a 23% reduction in bug resolution time. - Contributed to machine learning initiatives for 5G NR beam management, improving network reliability by 14%. - Led code review sessions and produced detailed design documentation, increasing delivery efficiency by 27%. - Collaborated with international teams to refine algorithms and enhance overall system stability.	
	WETFF Solutions Intern – Full Stack & Blockchain Developer	May 2021 – July 2021 India
	- Built a decentralized document management system (DApp) using Python’s Brownie framework and Solidity, ensuring high network uptime. - Developed smart contracts and integrated blockchain components with backend systems to improve data retrieval and scalability.	
	WOBB (Influencer Marketing Platform) Intern – ML Research Intern	December 2019 – January 2020 India
	- Implemented a machine learning model using GAN techniques in Python, optimizing data pipelines and enhancing model performance. - Collaborated with research teams to fine-tune model parameters and improve overall stability.	

Skills

C, C++ (C++11/14/17, STL), Python, Java, Verilog, VHDL, Software Development, System Design, Algorithm Design, Debugging, Unit Testing, CI/CD (Git, Docker, Kubernetes), Agile & DevOps, Multithreading, Concurrency, Low-Level Systems Programming, Memory Management, Performance Optimization, Linux, Cross-Functional Collaboration, Problem Solving
