

PRASHANT RAWAT

JAVA DEVELOPER

CONTACT

- +91-9650725583
- pr.rwt0025@gmail.com
- Delhi, India

SKILLS

- Core Java Spring Boot ,Microservices
- J2EE, Servlet, JDBC
- Spring Validation, Exception Handling
- Hibernate, JPA, ORM, Spring MVC
- Rest template, SOAP, REST
- Spring Security, OAuth2, JWT
- MySQL, PostgreSQL ,MongoDB,
- HTML, CSS, JS, JSTL, JSP
- Angular , Typescript
- JUnit, Integration Testing, Mockito
- Git and Git Hub
- STS, IntelliJ, Eclipse Visual Studio
- Postman
- Agile
- Cloud: AWS - S3, Beanstalk, RDS
- Ci/Cd,Jenkins,Splunk,Eureka

EDUCATION

- B Tech in Computer Science 2022 (HMR Institute of Technology And Management)

LANGUAGES

- English (Fluent)
- Hindi

SOFT SKILLS

- Team Player
- Time management
- Adaptability
- Accuracy

I am a Java developer with 2.5years of experience, skilled in both front-end and back-end technologies. My expertise includes **Java**, **Spring Boot**, and **microservices**, along with strong database management skills using **MySQL** and **PostgreSQL**. I am proficient in web development using **Angular**, **HTML**, **CSS**, and **TypeScript**. Additionally, I have experience in secure application development with **Spring Security** and **JWT**, as well as efficient data handling using **Hibernate** and **JPA**. I am adept at building scalable and robust applications and eager to contribute to dynamic projects.

TECHNICAL PROFICIENCY:

Backend Technologies

2022-2025

- I possess extensive experience in Java programming, leveraging object-oriented principles and advanced **Java 8** features to build robust applications.
- My expertise extends to streamlined development practices, utilizing **lambdas**, **streams**, and **Optionals** to enhance code efficiency.
- I have a solid background in creating and testing both **SOAP** and **REST web services**, proficiently managing **XML** and **JSON** data formats.
- In the realm of frameworks, I am adept in Spring, **Spring Boot**, and **Hibernate**, specializing in **ORM operations** and seamless database integration through **JPA**, including advanced CRUD functionalities and multipart file handling.
- My skills in security and authentication include configuring **Spring Security** and crafting **JWT token-based** systems for robust authentication and authorization, coupled with **Spring validation** to ensure data integrity.
- My testing capabilities encompass unit and integration testing using **JUnit** and **Mockito**, with a focus on robust exception handling through custom exception classes.
- As a web developer, I am skilled in developing **entities**, **repositories**, **RESTful controllers**, and **service layers**, with knowledge in implementing scalability and reliability features such as **load balancing** and circuit breakers using Docker and Kubernetes.
- I also bring expertise in data management, implementing effective **pagination** and **sorting** techniques, and a thorough understanding of **JDBC** and **Servlets** within **MVC architectures**.
- I develop and execute comprehensive marketing strategies and campaigns that align with the company's goals and objectives.
- I lead, mentor, and manage a high-performing marketing team, fostering a collaborative and results-driven work environment.
- I monitor brand consistency across all marketing channels.

Frontend Technologies:

- One year of experience in **Angular** and **TypeScript**, specializing in building dynamic and responsive web applications.
- Expertise in creating scalable single-page applications using advanced features like data-binding and dependency injection to optimize performance.
- Proven track record in developing custom directives and services to enhance HTML capabilities and streamline application logic.
- Skilled in integrating RESTful APIs with Angular applications, ensuring seamless data flow and robust functionality.
- Proficient in utilizing observables for efficient asynchronous operations and implementing comprehensive form validation techniques.
- Strong foundation in **HTML**, **CSS**, and TypeScript, delivering visually appealing and interactive user interfaces for impactful web solutions.

WORKED IN:

Happiest Minds Technologies

2022-2025

POSITION:

JAVA DEVELOPER

PROJECT:

Name : Voyageur 2.3.7

1.Technologies: Core Java, Java 8, API development, Spring Boot, Hibernate JPA, MySQL, Microservices.

2.Team Size: 13

3.Process: Agile Scrum

4.Tools: MySQL, IntelliJ, Postman, etc.

5.Duration: 2.5 years

6.Domain: Digital Travel Service Platform

7.Description: Voyageur 2.3.7 is a travel service platform developed using the Java Spring Boot framework. It includes features such as user authentication, property management, and booking processing. RESTful APIs were securely and efficiently created for communication with the frontend. User authentication and authorization were implemented using JWT tokens for enhanced security.

WORK EXPERIENCE:

2022-2025

Developed a comprehensive **Digital Travel Service** Platform with diverse features designed to streamline property management, facilitate user engagement, and manage bookings effectively. Ensured proper user linkage and status monitoring while maintaining precise Hibernate mapping across modules for seamless integration. Implemented third-party APIs to generate PDFs, Excel, and CSV files for booking records and user data, enhancing the application's reporting capabilities. Added pagination and sorting functionalities to optimize the user experience, allowing for smooth navigation through extensive datasets, such as property listings and reviews.

APPLICATION FEATURES:

- Designed secure **user registration** and login flows using **role-based access control** for admin and customer roles.
- Implemented CRUD operations with proper **exception handling** and **Spring validation**.
- Ensured proper **Hibernate mapping** among modules.
- Developed search and filter functionality using **JPQL**.
- Implemented user profile management, enabling secure updates, settings management, password resets via email verification, and photo uploads with **pagination support**
- Developed a property management system for owners to add, update, delete, and list properties, with image storage secured using **Amazon S3**.
- Automated booking confirmations with downloadable or printable documents post-transaction, implemented using **iText PDF**.
- Built a service to dynamically generate PDFs for booking confirmations and automated email delivery post-booking.
- Integrated with third-party SMS providers and the **Java Mail API** for reliable notifications, including booking confirmations and password resets.
- Integrated a PCI-DSS compliant, multi-payment gateway supporting credit cards, e-wallets, and secure online transactions.
- Developed a system for verified users to **book and search for hotel,tourist spot** and **ratings**, promoting trust and transparency.
- Built a system for real-time and scheduled notifications (push notifications, booking reminders, etc.).
- Created reporting modules for insights into booking trends, popular destinations, and revenue data for property owners.
- Applied best practices like HTTPS, **JWT token-based authentication**, and measures against web vulnerabilities.
- Collaborated with the database team (**MySQL, PostgreSQL**) for schema design and optimization.
- Provided comprehensive documentation and API references for seamless developer onboarding and integration.
- Implemented centralized logging and real-time performance monitoring using the **ELK stack** for proactive issue resolution.
- Utilized **Git, GitHub**, and **JIRA** for version control and project management
