Summary

Software Developer with expertise in **Microservices**, **EDA**, and scalable backend systems using **Node.js**, **NestJS**, and **RabbitMQ**. Skilled in **React**, **PostgreSQL**, **MongoDB**, **Docker**, **Kubernetes**, and **GCP** for building high-performance applications.

Education

Chitkara University, Rajpura, Punjab, India

2020 - 2023

- BCA | CGPA: **9.10**

Govt Co Ed Sr Sec School, Rajpura, Punjab, India

2019 - 2020

- PSEB (Class XII) | Percentage: **87.33**

Skills

Backend Development & Architecture: Node.js | NestJS | Microservices

Frontend Development: HTML | CSS | JavaScript | Next.js | React

Databases: PostgreSQL | MongoDB

Messaging & EDA: RabbitMQ

Cloud Platform: Google Cloud Platform (GCP)

Containerisation & Orchestration: Docker | Kubernetes

Work Experience

SDE-1 | Zenmonk Software & Services

June'2023 - Present

- Developed and maintained scalable full-stack applications using **Node.js**, **NestJS**, **React.js**, and **Next.js**, improving **system response time by 30%**.
- Architected and deployed **microservices** and **event-driven architectures (EDA)** with **RabbitMQ**, reducing message **processing latency by 40%**, enabling **real-time event handling** across multiple services.
- Built **high-performance APIs**, applying **CQRS**, **Repository Pattern**, and **Onion Architecture**, resulting in a **25% improvement in database query efficiency** and enhancing **code maintainability** for future feature expansion.
- Containerised and orchestrated applications using **Docker** and **Kubernetes** on **Google Cloud Platform (GCP)**, reducing **deployment time by 50%** and improving **system uptime to 99.9%**.

Projects

1. Complaint Management System

A university complaint management platform where users can file complaints, attach evidence, and track progress, while managers review cases, chat with whistleblowers, and manage witnesses via unique access links.

- Engineered a **microservices architecture** with **Domain-Driven Design (DDD)** for scalability and maintainability.
- Designed with **Vertical Slice Architecture + CQRS** to separate read/write concerns efficiently.
- Integrated the **Transactional Outbox Pattern** and **Idempotent Consumers** to guarantee **reliable** and **duplicate-free** message processing.

Tech Stack: NestJS, Next.js, RabbitMQ, Docker, Kubernetes, PostgreSQL

2. Order Flow Service

An **event-driven** order processing system using **Saga Choreography** to handle orders, billing, and shipping, ensuring consistency with **resilient messaging** and **database locking**. Built as a **Modular Monolith** for maintainability.

- Developed with **Choreography-based event-driven architecture** for seamless order processing.
- Ensured **fault-tolerant** message consumption with resilient handling mechanisms.
- Used **database locking** to maintain data integrity during concurrent operations.

Tech Stack: NestJS, Next.js, RabbitMQ, Docker, Kubernetes, PostgreSQL

Achievements

- **Team Player of the Year** – Awarded by Zenmonk Software & Services for outstanding collaboration and contributions to team success.
